

RLC, LLC LANDS MAJOR GOM HELICOPTER AWARD

Broussard, LA – March 26, 2014 – RLC, LLC (RLC) is proud to announce the award of a new contract to provide helicopter services (initially 5 aircraft) supporting a major oil and gas company on the shelf in the Gulf of Mexico. This award was the result of a competitive tender process that included numerous considerations including, safety, quality, infrastructure and customer service.

Dru Milke, President & CEO of RLC, described the contract award as, “We are extremely pleased to be selected as the provider of choice for this new customers’ Gulf of Mexico helicopter support. We are confident that this client will continue to be an active and innovative participant in E&P operations in the Gulf of Mexico.” Milke added, “Each of these aircraft will operate from separate RLC locations spanning from Galveston, Texas to Venice, Louisiana. This depth of support demonstrates the infrastructure RLC possesses which includes: 6 shore base facilities, access to over 20 offshore refueling stations and most importantly the outstanding customer service of our employees. Without these assets, this support would not be possible.”

RLC is the largest privately held helicopter operator in the Gulf of Mexico with a fleet of over 60 aircraft based along the gulf coast that are focused on the support of shelf production and exploration activities. Milke went on to acknowledge “Our plan for delivering safe, dependable service to E&P companies in the Gulf of Mexico is being recognized by current and prospective customers is working! We are pleased with our growth thus far. We are confident that we can continue this trend. Safety of our passengers, our employees and the natural environment are paramount to this success”.

RLC’s fleet of offshore-equipped helicopters transports personnel and equipment to offshore production platforms and drilling rigs from facilities strategically located across the Gulf Coast and in California. RLC serves leading oil and gas producers and energy services providers with exceptional levels of safety, performance and service.
